

aleph_start command doesn't start aleph

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We ran the command `aleph_start` and it seems to be going through the script and ends. However it seems that this only sets the environment. How to I attach it to the DB?

Resolution:

The file which needs to be executed to start Aleph is not `$alephe_root/aleph_start`, but rather, `$alephe_root/aleph_startup`. (`aleph_startup` does a "source" of `aleph_start`.)

For example, you could do:

```
cd $alephe_root  
csh -f aleph_startup > & aleph_startup.mmdd.log &
```
