

fixes" vs. "fix_request"s

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16
-

Description:

We see a reference to v16 "fr_2722". Is this a rep_change number ... or something else?

Resolution:

Something else. The "fr" stands for "fix request". This is different than a fix or rep_change. (The latter two are exactly synonymous.)

A "fix request" is a preliminary form of the fix. It is a fix which needs to be tested/evaluated before assigning it an official rep_change number.
