
Problem with z111s (borrower keywords - name search)

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

I search in Users (borrowers) List, in Keywords, for example, for "Gray, Anita L.", but I get I get "gray, david b." ; when I search for "gray l" I get "gray, anita l" which is correct. I've removed the end punctuation -- "Gray, Anita L" -- but it's still doesn't work correctly.

Resolution:

xxx50/tab/tab_filing should have this line commented:

```
55 icelandic_z303_name
```

Note that to activate a change in the table, you will need to re-started library batch queue and pc_server, and ran p-manage-64 which rebuilds the z303_name_key fields.

Here is the rep_change:

Description: special Icelandic filing:

Icelandic names file differently than "normal" names, and therefore programs have been added for filing headings in database, and for creating z303_name_key.

- 1) the system now uses tab_filing for creating Z303_NAME_KEY. Therefore,
 - (1a) there must a tab_filing table in the relevant ADM library (note that this might be the USR00 library). Until now tab_filing was not required in ADM.
 - (1b) tab_filing must have proc 55 for z303_name_key
 - (1c) proc 55 must have at least the following line

```
55 char_conv BORROWER-NAME-KEY
```

- 2) the filing proc for icelandic is icelandic_z303_name. e.g.

```
55 icelandic_z303_name  
55 char_conv BORROWER-NAME-KEY  
55 to_lower
```

If the name has more than 2 words, the last word in the name is positioned after the first word. e.g.

Hulda Maria Einarsdottir = Hulda Einarsdottir Maria
Hulda Hronn Friobertsdottir = Hulda Friobertsdottir Hronn
Hulda Gardarsdottir = Hulda Gardarsdottir
Hulda Sigrun Haraldsdottir = Hulda Haraldsdottir Sigrun

Hulda Klara Hjaltadottir = Hulda Hjaltadottir Klara

3) new filing procedure for "BIB" tab_filing, icelandic_name, transposes subfield 7 placing it after subfield 1. Example:

Display text:

Alexander [subfield] 7 Alfred [subfield] 1 Jonsson [subfield] c 1943, becomes:

Filing text: Alexander Jonsson Alfred 1943-

==> Because the procedure is dependent on subfield codes, it must be placed before del_subfield_code.

(keywords: p_manage_64 manage_64)
