

tab22 USER-DEF-6 and USER-DEF-7 don't work

- **Article Type:** General

 - **Product Version:** 20
-

Description:

We have used USER-DEF-1 to USER-DEF-5 in our abc01 tab22 successfully for some time. Now I have added USER-DEF-6 and USER-DEF-7 but find that they don't work. (They produce no z13u fields.)

Resolution:

USER-DEF-n" is the old form. It works for 1 - 5, but not 6-up.

For 6-up, you need to use:

USER-6
USER-7
<etc.>

This is described in the tab22 header.

Also, make sure the Function Code and Field/Paragraph values are in the correct columns.
