
Different GUI Services submission menus/screens depending on port

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

When we connect to our pc_server on port 6565 we see different GUI Services submission menus/screens than we connect to port 6505.

Resolution:

Generally, the screens you see should be the same regardless of which port you connect to. The exception is the case where -- as described in KB 4230 -- you have set up separate sets of screens for each ADM and have files like the following in \$alephe_root:

```
-rw-rw-r-- 1 aleph exlibris 5729 Jun 10 2010 pc_server_defaults.6515  
-rw-rw-r-- 1 aleph exlibris 5736 Jun 10 2010 pc_server_defaults.6525  
-rw-rw-r-- 1 aleph exlibris 5910 Jun 10 2010 pc_server_defaults.6535  
-rw-rw-r-- 1 aleph exlibris 5736 Jun 10 2010 pc_server_defaults.6545  
-rw-rw-r-- 1 aleph exlibris 5737 Jun 10 2010 pc_server_defaults.6555  
-rw-rw-r-- 1 aleph exlibris 5735 Jun 10 2010 pc_server_defaults.6565  
<etc.>
```

which contain a "setenv pc_services_directory" line for a specific ADM, such as:

```
setenv pc_services_directory $USER_MOUNT/u20_1/qrs50
```
