## p-manage-64

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

p-manage-64 doesn't run properly, it is very slow.

What can be done?

### Resolution:

p\_manage\_111 had been run in the ADM library, but not in the \$usr\_library (for Z303 only in the \$usr\_library). Therefore Z111 didn't have any oracle indexes which caused p\_manage\_64 to be very slow.

It has been fixed by doing UTIL A/17/1 to z111.

Still p\_manage\_111 must be run in usr\_library.

In short, the proper order should be p\_manage\_111 and then p\_manage\_64
