

fix_doc script isn't being invoked

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

A "fix_doc" we've created in xxx01/tab/import/fix_doc_add_NCO is not functioning since upgrade to v18. I noticed that there was no copy of this file in /exlibris/18/fs/utf_files/exlibris/fs/fsu01/tab/import.

Resolution:

The problem is the use of uppercase characters in the script name. Change your script from fix_doc_add_NCO to fix_doc_add_nco

Then change the corresponding entry in tab_fix:

```
INS2 fix_doc_do_file_08 fix_doc_add_nco
```
