Description:

We want to exercise the database, by hitting tables on the DB both via the application and via an oracle client. Does exlibris have any test query's?

If no query is available, could you point me in the direction of what should be hit, so I can have a query written here.

Resolution:

In EL commons there are scripts to analyze the performance of PC and WWW server:

http://www.exlibrisgroup.org/display/AlephCC/Aleph+pc_server+Log+Analyzer

http://www.exlibrisgroup.org/display/AlephCC/Aleph+www_server+Log+Analyzer

I would hit z05, z110, z69, z98, z97, z95, z01, z309, and z02 (in descending order of use).
