

Bib record linked to wrong ADM record

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

There have been cases where bib records have become unlinked from their correct ADM record and linked instead to a new, empty ADM record. How can this be fixed?

Resolution:

If you have created items, orders, etc., under the new ADM record. If the second ADM record is empty, you can do this to re-link the bib record to the original, correct ADM record:

- (1) Go to the current (incorrect) ADM record and copy the LKR field. (Copy it into Notepad or Wordpad.)
- (2) Delete the current (incorrect) ADM record.
- (3) Add the LKR field to the old (correct) ADM record and save it to the server.
