

JBOSS error "Incomplete Deployment listing"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

In logfile of JBOSS in Aleph we see following messages:

ERROR [org.jboss.deployment.scanner.URLDeploymentScanner] Incomplete Deployment listing

Is that anything we should concern about?

Resolution:

The messages are caused by redundant files in the "deploy" directory. The Aleph Service Pack mechanism backs up the old rest-dlf.war file and this backup file causes the errors in the log. The messages do not have any impact on the functionality. You can ignore them.
