Description

In the GUI catalog module, once a book is checked out to the reading room it gets the "In RR" location in the sublibrary field as a permanent status. Can this be corrected so that once a book is returned, the "In RR" location is replaced with the book's sublibrary?

Resolution

To correct this:

Copy circ_status_holding file from \$aleph_root/error_eng into your local \$alephe_root/error_eng, and change:

```
8009 0000 L In RR: $1
```

To:

```
8009 0000 L $1
```

And restart the pc_server. "In RR" should no longer display.
