
Failed to read reply"; ".../tmp/f_symbol.23634: Success" restarting pc_server

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

When we were unable to use our gui client this morning (Failed to read reply), I went to Util W to restart the pc_server and, following the "Enter server port number" prompt, got the following message:

```
/exlibris/aleph/a18_1/tmp/f_symbol.23634: Success
```

and I was unable to get beyond this point.

Nothing was written to the pc_server log besides the above message.

Resolution:

The /exlibris disk (filesystem) had run out of space.

After fixing that, the pc_server log had these messages:

```
Load: /tmp/utf_files/exlibris/aleph/u18_1/alephe/tab/tab_version  
2008-09-08 09:38:17 51 [000] [log] Server does not support client version '18.01'
```

I found that the /tmp/utf_files/exlibris/aleph/u18_1/alephe/tab/tab_version had a zero length:

```
-rw-rw-r-- 1 aleph aleph 0 Sep 8 08:51 tab_version
```

Doing util x/7 corrected the problem.
