
Canned Aleph OPAC statistics reports

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Description:

Are there canned Aleph OPAC statistics reports which I can run?

Resolution:

util s/4/1 shows you the number of OPAC sessions for each half-hour period, over the past 24 hours.

The ALEPH Reporting Center (ARC) includes predefined OPAC Statistics reports.

The Z69 OPAC Events table (see [Z69.pdf](#)) can be queried by local SQL scripts. See the article [SQL for OPAC statistics \(using z69 OPAC-event table\)](#) .

The "Aleph www_server Log Analyzer" in the EL Commons Code Share [or, as of 2014, the Developer Network] at http://www.exlibrisgroup.org/display/AlephCC/Aleph+www_server+Log+Analyzer does the following: "Analyze www_server logs. Output includes number of events in each hour, average elapsed time per event, number of events that take longer than n seconds, percentage of events that take longer than n seconds, number of reply timeouts, number of network connection timeouts."

It could be that other scripts will be added to the Developer Network.

See the article [SQL for OPAC statistics \(using z69 OPAC-event table\)](#) .
