

MetaLib 4.3.1 RSI IP problem

- **Article Type:** General
 - **Product:** SFX
 - **Product Version:** 4
-

Description:

In MetaLib 4.3.1, the XML which MetaLib sends SFX in order to see whether Full Text is available also includes the user's IP.

Currently, when the RSI (the SFX component which replies MetaLib whether Full Text is available) receives an IP which is not included in one of the IP ranges of the SFX institutes, it automatically replies as if Full Text is not available, even if it actually is available.

Resolution:

Fixed in the SFX September update.
