
How to repair indexes without running keyword index regen

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7
-

Desired Outcome Goal:

Fix Voyager (non-keyword) indexes for an instance without running keyword index regen.

Procedure:

1. Log in as Voyager.

2. cd to regen directory.

For example, cd /m1/incoming/regen/xxxxdb (where xxxdb is the Voyager Database Instance)

3. Run the following command to access xxxdb environment:

```
dlib xxxdb
```

4. Run the following sql command.

```
sqlplus $USERPASS < indexes.all.script
```

Note:

xxxxdb: Voyager DB instance

Note that indexes.all.script rebuilds every index on every table.
