

Cannot run version check from within GUI

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

When I try to run version check (under the "ALEPH" menu option in the GUI), I get the message "Selected version directory does not exist), and the "update version" window has the following information in the "Place on the server" field: "\$aleph_dev/aleph/pc_exe/version".

After clicking on "OK", I tried to type over the "Place on the server" field, but the GUI doesn't allow me to do so (it seems to be a read-only field).

I couldn't find a .ini file where I could change this param.

Does this mean I have to create this directory on the server (and place future files in there)?

Resolution:

The root directory for managing version control is defined in alephcom.ini on the local PC. This is located in ..\alephcom\tab

The specific parameter is Type in the [VersionControl] section. If absent, the system defaults to the directory \$aleph_dev/aleph/pc_exe/version
