

## Hide SFX FullText Icon ?

- **Article Type:** General
  - **Product:** MetaLib
  - **Product Version:** 4
- 

### Description:

We don't like what the SFX API is doing with the FullText icon in MetaLib.  
How do we turn it off or hide it?

### Resolution:

You can shut off the MetaLib Full Text indicator (which comes from SFX) in `www_server.conf`:

```
setenv check_full_text_avail
```

The SFX API is queried to determine if full text services are available for a given record.

Options are:

"None" (no indicators)

"Table-Brief" (only table/brief views)

"Full only" (only full view)

"All" (all views)
