
Doc Validation Error: 007: Field length is 06; expected ..

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

We get the following "Doc Validation Errors" when performing Edit/Check Record :

007: Field length is 06; expected 11
007: Field length is 06; expected 12
007: Field length is 06; expected 13
007: Field length is 06; expected 14

How can we prevent this?

Resolution:

The "Field length is ..; expected .." is message 7011 in the \$alephe_error_eng/check_doc file. You could change the text there, if you like.

This check is performed when "check_fixed_field_length" is specified as the "check program to run" in the check_doc_field_XXX files (./xxx01/tab/check_doc_field_006, check_doc_field_007, check_doc_field_008, or check_doc_field_ldr). In the case of the 007, removing the check_fixed_field_length from the check_doc_field_007 should prevent the message from appearing.
