Question

How to set an initial persistent limit for the Basic Search tab in Tomcat WebVoyage?

Answer

1. SSH to server (if split server, the web server where your custom skins live).
2. `cd /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui/<skin>`
3. Open `webvoyage.properties` & find the Limit To section.

```
#####  
#  
# Limit To  
#  
#####
```

4. Find the following parameter: `page.search.limitTo.selected=`
 5. Supply a value after the equal (=) symbol that corresponds to the default limit you'd like Basic Search to use.
 6. Save changes & view in WebVoyage interface.
