
Testing GUI function against Ex Libris-distributed USM files on your server

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We need to test a GUI function against the Ex Libris-distributed USM files (on our server). How can we do this?

Resolution:

You should update your `.\alephcom\tab\library.ini` so that you have USM01 and USM50 lines which point to your server, like this:

USM01 - USMARC Bibliographic USM01 <your server:6991>

USM50 - USMARC Administrative USM50 <your server:6991>

Then you would connect to USM50 with the client you are testing. You would log in with username MASTER, password MASTER.
