## Re-indexing and Union Course Reserves

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

I have added a new word index to the ABC30 tables, and will run p\_manage\_01 to build the content.

As Course Reserves is a Union Catalogue, do I also need to re-run all the steps mentioned in Section 10.3?

### 10.3 Union View Indexing

If you want to re-build an existing CR database, after all the indexes are built p\_union\_01 (build empty z120 records) and p\_union\_02 (creates z120 records) should be run once. Then create the z127 records. It is necessary to run the process to create the Z127 records after running p\_union\_02. The process is run from the command line and does not have any parameters. The syntax for running it is: csh -f \$aleph\_proc/create\_Z127.

### Resolution:

Though the initial implementation of GUI Course Reserves requires that p\_manage\_01, p\_union\_01, p\_union\_02, and other jobs be run, there is no dependency between p\_manage\_01 and the union jobs.

The union jobs use the NTL Words index (built by p\_manage\_01), but since all of the CR records have already been Word-indexed -- either by the original p\_manage\_01 or later by ue\_01 -- the NTL index entries already exist. When you run p\_manage\_01 you will simply be regenerating the same NTL index entries that exist now.
