## Error message while accessing the statistics module

- **Article Type:** General
  - **Product:** MetaLib
  - **Product Version:** 3
- 

### Description:

When I try MetaLib Search Queries in the /M interface I have this error message:

```
<html><body>
```

```
<!--
```

```
Error Code = 11
```

```
Error Text = environment variable METALIB_ADMIN is not defined
```

```
-->
```

```
</body></html>
```

I check this variable using the following command and the variable does exist:

```
>>echo $METALIB_ADMIN
```

```
METALIB_ADMIN/METALIB_ADMIN
```

What should I do?

### Resolution:

The variable METALIB\_ADMIN is defined in the system but probably not updated in the file metalib.conf .

Please run the commands below:

```
>>source metalib_conf_create
```

```
>>start_apache
```

```
>>start_w
```

and re-check the statistics module

---

## Additional Information

statistics
