  - **Product Version:** 2
- 

### Question:

When amending license in License workflow there are two similar steps: "Identify the amended license for linking" and "Link the e-product to the amended license". What is the difference between these two steps?

### Answer:

In the first step, "Identify the amended license for linking," you will enter the license code of the license that should be linked.

The second step, "Link the e-product to the amended license," you will actually link the license to the e-product.

The reason for the distinction is that so these two steps can be done by different users with different privileges.
