
Copy database or UNIX files into another instance

- **Article Type:** General
 - **Product:** SFX
 - **Product Version:** 3
-

Description:

We are ready to move our test instance environment into the production instance. What files need to be copied?

Resolution:

The procedure we recommend for copying databases from test to production or vice versa can be run via the `server_admin_util` tool. It is described in the SFX SysAdmin Guide: section 4.5.6 Copy database to a different instance.

You can also copy certain Unix files from one instance to another using `server_admin_util`'s Filesystem Maintenance feature. This is described in the SFX SysAdmin Guide: section 4.3.2 Additional programs/ Copy files from one instance to another.
