
Thresholds based on IP adress fail in SFX4

- **Article Type:** General
 - **Product:** SFX
 - **Product Version:** 4
-

Description:

In the 'General User Guide' on page 105 the following threshold appears as an example:

```
$ENV{'HTTP_X_FORWARDED_FOR'} eq '157.193.59.119'
```

When trying to insert it as a local threshold you will get an error message saying 'Incorrect number of parameters used for this type of threshold'.

Resolution:
