

/exlibris/aleph/a20_1/alephe: No such file or directory"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

> cd \$alephe_root gives the following error:

```
/exlibris/aleph/a20_1/alephe: No such file or directory.
```

Why is it looking for a20_1 -- shouldn't it be looking in u20_1?

Resolution:

Looking in aleph_start, we see:

```
setenv alephe_root $alephe_dev/alephe
```

and

```
# setenv alephe_dev ${USER_MOUNT}u${ALEPH_VERSION}_$ALEPH_COPY  
setenv alephe_dev /exlibris/aleph/a20_1
```

The as-delivered "setenv alephe_dev" has been hard-coded as a20_1. This line should be deleted, the original line uncommented, and then "source aleph_start" to make it take effect.
