## Cannot Use F3 for 260\$b

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

In our USM01 library, we can't use F3 for 260\$b. We get the following error message:

-----

Aleph Catalog

Field/subfield 260-- is not defined in scancode.dat

-----

I checked the scancode.dat and it contains a 260##b line:

```
USM01>> grep 260 scancode.dat
```

```
260##a PLA
```

```
260##b PUB
```

```
USM01>> grep PUB tab00.eng
```

```
H PUB ACC 01 00 00 Publisher
```

```
USM01>> grep PUB tab11_acc
```

```
260## PUB b
```

Why isn't this working?

### Resolution:

Please note the names of the F3 and F4 functions:

F3 = Search FIELD Headings of Current Base

F4 = Search SUBFIELD Headings of Current Base

scancode.dat entries that have a subfield in column 1 at the end of the field tag (position 6) are searched using F4. For example,

```
260##a PLA
```

Changing this entry to

```
260## PUB
```

would make the 260 field searchable via F3, but this is not recommended.

Note: if you change the files in pc\_tab/catalog then you must run util M/7 to repackage the changes.
