

## tab\_hold\_request Header "Suggested Use"

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

Is there any info what checks are good for TITLE-REQ? check\_hold\_request\_o is active in INFO, per tab\_hold\_request header.

### Resolution:

The column in the header of tab\_hold\_request is labeled \*suggested\* use.

The program will process any check\_hold\_request lines you have for TITLE-REQ when it is processing a Title request. In some cases, the check may not really make sense and will have no effect, but, anyway, it will try.

The same is true for PRE, INFO, POST, etc.
