

plus sign instead of number of hits for browse searches

- **Article Type:** General

Description:

When doing a browse search in the abc01, the display is missing the system number (#Docs). Instead, every record shows just a plus sign where the number of hits should be.

Searches I did were the following:

browse by subject and author/title from the gui client (subject = italy; author/title = wood)

Resolution:

In your tab100 table for abc01, you have the variable, ACC-COUNT-LIMIT set to zero. This says that zero is the maximum number of hits you want reported. Anything beyond that would normally show as "<limit>+" (e.g. 80+). But since it is set to zero, it shows only the plus sign. If you set that value to something higher, you will begin to see the proper counts in your GUI clients.
