

Circulation Transaction Log

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

Is there a way to look at all circulation transactions that took place on July 13 between 12:30 pm and 12:45 pm? I am trying to determine the exact sequence of events that resulted in an item being checked out to the wrong patron.

Resolution:

You can do this with an SQL query on the Z35 table:

This table contains information regarding the various transactions of the GUI/Web Circulation (loans, returns, holds, photocopy requests) and the GUI Search/Web OPAC (searching).

The Z35_REC_KEY contains the system number of the administrative record associated with the circulation event.

The Z35-EVENT-DAY contains the Date the transaction took place, in the format YYYYMMDD

The Z35-EVENT-HOUR contains the Hour the transaction took place, in the format HHMM

A query using these three elements should give you the information you need.
