
How to tell if p_manage_01 was successful

- **Article Type:** General

Description:

I need to ask you about the logs, I had to rerun WORD again. Looking in \$alephe_scratch, I see there is one out there and when I checked it looks like this part of the job finished, but there are no "Load completed" counts.

Resolution:

The odn07_p_manage_01.00027 job is OK:

It ends with "ODN07 is not in xxxx_STARTUP_LIBS" messages, which are preceded by: "Index creation for z9n completed" messages.

Since you have a separate Oracle server, the loading is "NONDIRECT" and you don't have "Load completed" messages; you have "Commit point reached" messages. There are 1,208,360 of them:

```
>grep -c 'Commit point' odn07_p_manage_01.00027  
1208360
```

(As described in KB 5719, the initial "Load completed - logical record count 0" is for the z970 and can be ignored.)
