
Only one Sublib/Coll/Call#, but two "Library/Collection" holdings in OPAC

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

The King Guide to Parenteral Admixtures is showing two "Library/Collection" holdings in the OPAC (both "ABC : Books"), but has only one holdings record in the GUI, and all items are attached to that single holdings record.

Why are two "Library/Collection's" showing up in the OPAC?

Resolution:

The first item for this title (16865-10) has z30_material BOOKS:

```
02 z30_rec_key \  
03 doc_number .....000016865  
03 item_sequence .....000010  
02 z30_barcode .....100010147  
02 z30_sub_library .....WO  
02 z30_material .....BOOKS <----  
02 z30_item_status .....01  
<etc.>
```

The next (16865-40) -- and the others following -- have z30_material ISSUE:

```
02 z30_rec_key \  
03 doc_number .....000016865  
03 item_sequence .....000040  
02 z30_barcode .....13967*  
02 z30_sub_library .....WO  
02 z30_material .....ISSUE <----  
02 z30_item_status .....05  
<etc.>
```

The PST and LOC routines look at the sublibrary, collection, call number, and material, and display each unique combination that they find.

If you change the z30_material of 16865-10 to "ISSUE", it should show just a single holding in the OPAC.
