
Manual update of service pack configuration files [UTIL-SP-1-1]

- **Article Type:** General
 - **Product:** DigiTool
 - **Product Version:** 3
-

Description:

I made a typo while configuring the UTIL-SP-1-1 [parameters setting] menu and accidentally saved it.

When I try to go to UTIL SP1/1 I would get:

^H^H: Event not found.

The ^H^H characters in the configuration file are confusing it and so it won't display (so that I can change it).

Resolution:

In order to update this manually you can go to /exlibris/dtl/u3_1/dtle and update the "sp.config" file.

```
# This file was created automatically - do not edit
```

```
set ftp_server = "ftp.exlibris.co.il"
```

```
set ftp_user = "dtl_sp"
```

```
set ftp_opts = ""
```

```
set sp_dir = "/exlibris/dtl/d3_1/dtlm/scratch/sp"
```

```
set exl_mail = "dgtl3imp@exlibris.co.il"
```

```
set cust_code = "ABC01"
```

```
set cust_mail = "admin@exlibrisgroup.com"
```

```
set language = "english"
```

```
set mail_exl_flag = "Y"
```

```
# End of config
```

The ftp password is saved in the following file:

```
/exlibris/dtl/u3_1/dtle/sp_pass
```

Additional Information

util SP, UTIL SP, aleph, metalib, service pack, parameters
