## Call number not displaying in Course Doc List

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

In the Circ module, Course Reserves, the call number frequently does not show up in the in Course Doc List. We have the call number coming from LOC## h in tab22.

Also, despite the fact that we have the following line in the abc30 tab\_expand:

```
UE-39 expand_doc_bib_usm
```

most xxx30 records do *\*not\** display the LOC field in util/f/4.

### Resolution:

The bib data displayed in the Course Doc List comes from the z13 record. In your case we are seeing that the z13\_call\_no is blank. This is the result of the CREATE-Z13 lines in the abc30 tab\_expand. You have:

```
CREATE-Z13 expand_doc_course  
CREATE-Z13 expand_doc_bib_loc_usm
```

The expand\_doc\_bib\_loc\_usm works only for records whose xxx30 doc is linked to the item via a (z103) ADM-type link; it does not work for ITM-type links:

the xxx30 professors' copies which are linked to the xxx50 item directly have a z103\_lkr\_type ADM;  
the xxx30 records which are linked to the xxx50 item via an xxx01 bib record have a z103\_lkr\_type ITM.

As shown in KB 4022, expand\_doc\_bib\_loc\_usm is a hard-coded set of calls to expand\_doc\_bib\_loc\_n\_x programs.

expand\_doc\_bib\_loc\_1\_b reads items linked via an ADM-type link;  
expand\_doc\_bib\_loc\_1\_b2 reads items linked via an ITM-type link.

expand\_doc\_bib\_loc\_1\_b2 is not one of the programs called by expand\_doc\_bib\_loc\_usm.

In order to include both LKR types (ADM and ITM), the xxx30 tab\_expand needs to specify both \_b and \_b2:

```
CREATE-Z13 expand_doc_course  
CREATE-Z13 expand_doc_bib_loc_1_a  
CREATE-Z13 expand_doc_bib_loc_1_b  
CREATE-Z13 expand_doc_bib_loc_1_b2  
CREATE-Z13 expand_doc_bib_loc_1_c  
CREATE-Z13 expand_doc_sort_loc_b  
CREATE-Z13 expand_doc_bib_loc_2_a  
CREATE-Z13 expand_doc_bib_loc_3_a
```

CREATE-Z13 expand\_doc\_bib\_loc\_4\_a

Note: the expand\_doc\_bib\_loc\_4\_a is necessary only if you are using the LOC field; it may be omitted if you are specifying "PST" as the field.

Other xxx30 indexes on call numbers may also need to have the relevant section of tab\_expand changed (to include these expand\_doc\_bib\_loc\_n\_x lines instead of expand\_doc\_bib\_loc\_usm) and the index regenerated.

Note that when you change tab\_expand you need to restart ue\_01, pc\_server, and www\_server.
