## max\_unit\_price\_diff\_percent Behavior Changed in v18

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

In a previous version, we were instructed to set the setenv max\_unit\_price\_diff\_percent to 9999 to prevent the error message when adding line items.

In v18, this is no longer working.

The system is now only reading the first 3 characters (as 999%) of the environment variable and is applying the 999% upper limit to the order price and presents the "Actual unit price exceeds the estimated unit price by more than 999%". We have many orders which were converted with a default price of .01. This means that any line item added for more than .10 (.01\* 9.99) is generating the error.

Is there a way to configure the system so that this check is not made?

### Resolution:

In order to \*not\* receive the alert message:

"Actual unit price (\$1 \$2) exceeds the estimated unit price (\$3 \$4) by more than \$5 percent. Continue?"

Please comment out the line

```
setenv max_unit_price_diff_percent
```

in the file pc\_server\_defaults, which is located under \$alephe\_root.

---

## Additional Information

unit price, max\_unit\_price\_diff\_percent
