

Can MarcExport include some item data?

- **Product:** Voyager
 - **Product Version:** 8.1.1
-

Question

Is it possible for MarcExport to include barcode, volume and copy information from an item record?

Answer

MarcExport can export data from MARC format records: bibliographic, holdings (mfhd), and authority. Item records and item record data cannot be exported with MarcExport.

Additional Information

- Exported bibliographic records can be edited to add fields to represent generic item data using a third party editing program such MARCEdit.
 - Voyager PrePackaged Access Reports may be used to extract item information. See the Reporter Users' Guide, Chapter 7: Prepackaged Access Reports.
 - The Voy-L listserv may be a good source of information for customers needing to represent Voyager item information in exported bibliographic records.
