  - **Product Version:** 17.01
- 

### Description:

The oclc\_server log has this message:

5007 Could not find any tab\_z30 containing holding-code â€¦What does this mean?

### Resolution:

This 5007 message displays when it gets a non-zero return code from tab\_z30\_get..

tab\_z30\_get reads the \$alephe\_tab library\_relation table looking for ADM relations for the bib library (specified in the tab\_oclc line for the port being used)..

It reads the tab\_z30 table for each of the TAB-RELATION-LIBRARY libraries and tries to match the 049 OCLC code against column 1 of these tab\_z30's..

If it goes through all the tab\_z30's and doesn't find a match, then it returns an error code of "1" to generic\_loader.
