Question

Is it possible to edit the variables from \$aleph_root/error_eng/pc_cat_c0203?

Effected display is the "RecordTree"(2004 0000 L \$1[\$2 ; \$5]) in cataloging module which is activated with parameter "ShowDetailedInfo=Y" in catalog.ini. Example attached.

Answer

The displayed fields are hardcoded in the program and the display can't be changed. Fields are \$1=Title, \$2=Author, \$3=System number, \$4=Format, \$5=Year. Only the order of the fields may be changed in table \$aleph_root/error_eng/pc_cat_c0203, e.g. „2004 0000 L \$2: \$1, \$5“

Category: Cataloging (500)
