Question

How can we add util x/06 [Clean apache_media] to the job_list so that it runs automatically at a specific time.

Answer

Please implement a new line in \$alephe_tab/job_list like

```
00 23:00:00 N util_x_06_log csh -f /exlibris/aleph/a16_5/aleph/proc/util_x_06 no_questions
```

In that example Util X_06 runs every Sunday at 23:00:00 as the "00" in column 1 stands for Sunday, "01" for Monday etc.

Additional Information

For activating the job_list after modification do util e/16/09.
