

How do I rollover seasons for Course Reserves?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

On our test instance of Aleph 20 I need to roll over the semester from spring to summer in Course Reserves and I would like confirmation of the proper steps to do so.

In Version 18 we would run p_course_03 via the web interface and enable the option to take the items off reserves. I would update the tab_base.eng file and in the line for ABC30_P base change it from the spring to summer. Then Re-index the ABC30 database using manage-01.

In version 20 is the method I use now:

Run Course-05 (on ABC50 or ABC30 library?)

Run Course-03 (on ABC50 or ABC30 library?)

Edit the new U_ABC30_C in the tab_base.eng file to reflect the new season.

Re-index the ABC30 database using p_manage_01.

Resolution:

The steps which you describe are correct. You would run p_course_05 and p_course_03 from the abc50 Services.

{The Course Reading jobs are in the Circulation menu only. When the program sees abc50 as the ADM library, it reads the CRS relation in the library_relation table to get the Course Reserves library (abc30) for that ADM.}
