
ORA-01722: invalid number in word index log

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

We ran the p_manage_01 word index on our v20 test system. There's an error in the indexing log file. I can search from Web OPAC after the index. But I am not sure if this index process is successful. Please see the error in the log;

aleph_admin@ALEPH0> SET Z52_SEQUENCE = (SELECT MAX(Z00_DOC_NUMBER) FROM ABC01.Z00)

*

ERROR at line 2:

ORA-01722: invalid number

I checked the table z00 from database and find there is one record with not valid z00_doc_number "01209nam". Should I delete this record?

Resolution:

If the job seems to have worked OK otherwise, probably this "invalid number" error can be ignored.

A record with z00_doc_number 01209nam is clearly wrong. If you can bring it up in GUI Cataloging and delete it, that would be best. (Then ue_01 should remove any index entries.)

KB 16384-24964 is a somewhat similar case.
