

## How does EDI Connection Profile use Locations in the Location drop-down?

- **Product:** Voyager
- 

### Question

How does EDI Connection Profile use Locations in the Location drop-down?

### Answer

The locations in the drop-down are related to Security (which operators can use the profile). If the Location in the EDI Connection Profile is not included in an operator's Acquisitions Security Profile, that operator will not be able to load messages using that EDI Connection Profile
