

## Location of new fields in sequential PLIF

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

The v18 p\_file\_20 help doesn't specify location for birthplace and gender in global patron section.

### Resolution:

While any z303, z304, or z305 field can be included in the XML-format p\_file\_20 input file, the sequential input file is fixed to include only certain fields.

The z303\_gender and z303\_birthplace fields are not included in the version 18 (or version 19) sequential PLIF.

If you want to see, definitively, what fields, in what order, are available in the sequential PLIF, do this:

```
> asm copy
> view P_FILE_20_USER <for z303>
> view P_FILE_20_ADDR <for z304>
> view P_FILE_20_BOR <for z305>
> view P_FILE_20_INDEX <for z308>
```
