Question

Are the following the correct parameters for running file-04 ("Import Database Tables") to load a znn.seqaa file produced by file-03 ("Export Database Tables")?

Table to Import: znn.seqaa
Procedure to Run: Replace
File format: Fixed

Answer

Yes -- except the "Table to Import" assumes the ".seqaa" suffix. You need enter only "znn" -- no "seqaa".

Additional Information

See KB 5928 (file-04: replace vs. append) for discussion of "Procedure to Run" values.
