
Custom job in job_list: "Unable to open log"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

I set up a custom job in job_list, but when the system tries to run the job the log shows an error regarding the log:

```
alephe/tab/job_list.conf
! mc 20071210
W4 W NYYYYYYY
```

```
alephe/tab/job_list
! yesterday's returns
! MC 20071207
W4 06:30:00 N yesterdays_retur.log /app/exlibris/aleph/prod/bcc/sny_scripts/yesterdays_returns_sql
```

```
util e/15/4
```

Performing Jobs:

```
-----
/app/exlibris/aleph/prod/bcc/sny_scripts/yesterdays_returns_sql
Unable to open log file /aleph/prod/bcc/alephe/scratch//app/exlibris/aleph/prod/bcc/sny_scripts/
yesterdays_returns_sql_111003
44
```

Wait for: 81000 seconds

Resolution:

From site: "The shell script called in job_list needed execute permission in unix. I copied the existing scripts in my new script, but had overlooked the permission settings. So the shell script needed 755, but not the sql script."
