
EDI:Latin-1 diacritics not correctly sent via EDI

- **Article Type:** General
 - **Product:** Voyager
 - **Product Version:** 7.2.1
-

Description:

Bug Report Form for 16384-16465

Module(s): Acquisitions/EDI

Server platform(s) affected: Solaris/all

PC OS (if applicable): n/a

Browser & version (if applicable): n/a

Release(s): reported in 7.2.1; replicated in 8.0

Last version without bug (if applicable): ?

Expected results: Latin-1 diacritics should be correctly transmitted in EDI messages.

Actual results: Some Latin-1 diacritics are not correctly transmitted in EDI messages.

Workflow implications: Vendors may have trouble receiving the files.

Replication steps:

Find a record that has, for example, an ?, which is supported in the Latin-1 character set.

Create a PO and add a line item using this bib record.

On the PO, go to File>Send via EDI.

Go to EDI>Process EDI Messages>Outgoing, and enter a Search By of Create Date equal to today's date.

Highlight the message you created and hit Send.

Supply a file name and hit OK.

On the server, go to /m1/voyager/yyydb/edi/outgoing and view the message you just generated – you'll see that the ? is incorrectly transmitted (for example, re?pertoire becomes re??pertoire).

Resolution:
