
Searching Headings in logical base

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 18 and up

Description:

We would like to limit the headings search during cataloging to a logical base that we created to filter out some records.

We changed the scancode.dat from:

```
LOCAL USM01 USM10 USM12 USM01
```

to:

```
LOCAL EDUCATION USM10 USM12 EDUCATION
```

It works with Ctrl+F3 (Search field headings of Other base), but not with F3 (Search field headings of Current base).

It is possible to make it work with F3?

Resolution:

Searching logical bases during Cataloging is possible only with Ctrl+F3.

Since "current base" is always the base you're connected to, and it cannot be a logical base, only a library (e.g. USM01), all the logical bases are "other" bases, and should be searched with Ctrl+F3.

Please set the "LOCAL" line of your scancode.dat as follows:

```
LOCAL USM01 USM10 USM12 EDUCATION
```

Additional Information

scancode.dat, logical base
