
Adding an IRD to search Sage Journals via Highwire

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 3
-

Description:

We would like to search a subset of Sage Journals hosted via the Highwire Press platform. We need help creating a record for the Sage Journals Online based on the existing Highwire Press resource in the CKB. Any suggestions on how we can set up such a configuration?

Resolution:

In order to limit the SAGE Journals resource to only search particular SAGE journals, make the following adjustments to the Hostname:Port field in the local SAGE Journals Online IRD:

- 1) Go to the Web page <http://online.sagepub.com/cgi/search>
- 2) In the field called "Specify Journals to Search" Mark the radio button "Journals selected from list at bottom of page".
- 3) Go to the complete SAGE Journals list at <http://online.sagepub.com/cgi/search#list>
- 4) Mark the boxes next to the journals you would like to include in your SAGE Journals ONLINE search via MetaLib.
- 5) Click on the "Search" button.
- 6) Copy the URL of the search results page and paste it in a document. The URL will look something like this:

http://online.sagepub.com/cgi/searchresults?pubdate_year=&volume=&firstpage=&DOI=&author1=&author2=&title=&andorexacttitle=and&titleabstract=&andorexacttitleabs=and&fulltext=&andorexactfulltext=and&src=selected&fmonth=Jan&fyear=1947&tmonth=Aug&tyear=2006&RESULTFORMAT=1&hits=10&hitsbrief=25&sortspec=relevance&sortspecbrief=relevance&sendit=Search&journal_set=spach&resourcetype=1&datedef=1+January+1947&tdatef=31+Aug+2006

- 7) The codes of the journals you searched in will appear in the URL in the format: journal_set=XXXXX.
For example: "journal_set=spach" represents the Accounting History Journal.

- 8) Add the following at the end of the existing Hostname:Port field in the local SAGE Journals Online IRD, copying the relevant journal codes from the result page URL:

src=selected&journal_set=XXXXX&

For example, if you only want to search the Accounting History Journal, your Hostname:Port field would look like this:

http://online.sagepub.com/cgi/searchresults?src=selected&journal_set=spach&

Add an additional &journal_set=XXXXX for each journal you wish to include in the search, with the relevant journal code replacing "XXXXX".

Remember to end the Hostname:Port field with an "&".
