Description:

How can we tell if p_manage_32 has completed successfully?

Resolution:

If the \$data_scratch/p_manage_32.cycles files has the expected bases, with all "+"s,
if there are no "error ", "error:", "fail", etc., messages,

and if the "Load completed" messages in the job log do not have a value of 0, that indicates that the z0102 records have loaded successfully.

Do util a/17/14 for z0102 to verify that the z0102 Oracle indexes are present and valid.

Searching bases which have "Y" in column 8 of tab_base.eng in the Web OPAC and getting correct results is the ultimate test of success.
