

## OK/Cancel pop-up error without message

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

A pop up appears with the title and then the Override/Cancel/OK buttons, but no error messages are listed in the box.

How do I know what is causing the error?

### Resolution:

More than likely the error message text has been deleted from the corresponding file in the \$alephe\_root/error\_eng. Compare the customized files you have in \$alephe\_root/error\_eng to the generic files in \$alephe\_root/error\_eng and you should be able to determine the missing error message.
